

## X FOGGER 530

---

Boasting all of the features of the X-515, the X-530 has the added bonus of a massive 3000Watt heater and will produce double the fog output of any other model or make of fogger. With all the great features of the X-Range combined, you will get the highest quality fog continuously, instantly, whenever required. This gigantic fogger has the power to suit any venue or application where large volumes of dense airborne fog are required. It is particularly well suited to major outdoor events where conditions may be unpredictable and varied. With the X-10 timer control module, you can closely control the duration, interval and volume of fog generated in seconds and percentage for exceptional defined programming. DMX channel selection is as straightforward as plugging the X-20 DMX control module and selecting whatever channel is desired. The X-30 wireless remote is another control option for the X-530. This machine is available as a 220V version only, due to its high mains power consumption.
