New Software Release

Technical Bulletin

New R140 Handheld Remote

We are pleased to introduce a new wired Handheld remote for the 300 and 500 series consoles. The new remote will replace the current R120 units effective immediately.

66145 R140 Remote

The new remote will be offered at the same price as the current R120 and offers back lit key labels for the first time in a wired system. The remote also offers a larger display area.

The 2.6.15 console software release will support the new remote and must be loaded on any system that is being supplied with the new device. R140 and Wireless remotes may be mixed on any system.

Designer Remote USB Drive
Also new with this release is our new USB Designer Remote key drive. The new drive features include:

- Plug in USB drive allows users to use their notebook computer (or any other computer) as console remote video display and remote access device
- Two modes of operation are available Monitor mode for remote video operation or full function remote mode for complete system access
- Operates with Windows 2000 or XP and Mac OS X
- Each USB drive also contains a complete set of system operation manuals and tutorials in PDF format
- The drive is easy to use and set up on any computer with a wired or wireless Ethernet Card
- Each system includes a keyboard short cut guide for system access

67525 Designer Remote Drive

Both of these new products can be ordered immediately.

SN110 Software update
The 2.6.15 software release also offers improvements for the SN110 nodes:

- Web browsing has been improved
- New "heartbeat" indicators have been added on the LCD
  - The first heart symbol indicates node is 'alive'
  - The second heart symbol indicates node has seen at least one other
- A flashing Right arrow indicates a node is putting DMX onto the network
- A flashing Left arrow indicates node has seen network DMX for its use
